speaking; not responding much to other people.	\bigcirc	Has needed treatment with a breathing machine in the hospital.	A liver transplant is not possible.	\bigcirc
Frequent falls; fractured hip.		Other conditions		
Frequent infections; pneumonia.		People who are less well and may die from other health problems or		
Nervous system problems (eg Parkinson's, MS, stroke, motor neurone disease)		complications. There is no treatment available or it will not work well.		\bigcirc
		What we can do to help this person and their family.		
Physical and mental health are getting worse.		 Start talking with the person and their family about why making plans for care is important. 		0

- Ask for help and advice from a nurse, doctor or other professional who can assess the person and their family and help plan care.
- We can look at the person's medicines and other treatments to make sure we are giving them the best care or get advice from a specialist if problems are complicated or hard to manage.
- We need to plan early if the person might not be able to decide things in the future.
- We make a record of the care plan and share it with people who need to see it.
