

Medical Entomology Quarterly Report South West Health Region: Oct – Dec 2021

Ross River virus disease case data summary

Western Australia: 2021/22

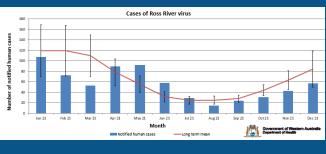

Data reflected in this summary of mosquito-borne disease is taken from the Western Australia Notifiable Infectious Disease Database (WANIDD) and includes enhanced surveillance data collected by Population Health Units and local governments (only locations with notified cases of disease are shown in tables and figures).

Ross River virus (RRV)

Western Australia

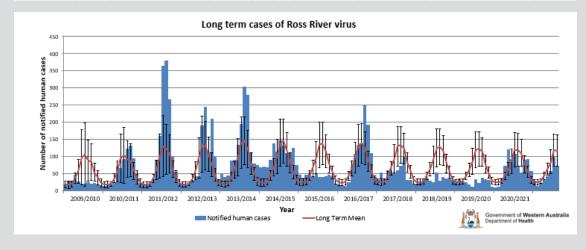

A total of **129** cases of RRV were notified between 1 October 2021 and 31 December 2021 in Western Australia. Of these **97** cases were notified by Doctor and follow-up data is available for **63** cases.

The number of cases was **significantly below the long term mean** for October and November, and below the long term mean for December 2021.

Ross River virus disease case data summary

South West Health Region: Oct - Dec 2021

Data reflected in this summary of mosquito-borne disease is taken from the Western Australia Notifiable Infectious Disease Database (WANIDD) and includes enhanced surveillance data collected by Population Health Units and local governments (only locations with notified cases of disease are shown in tables and figures).

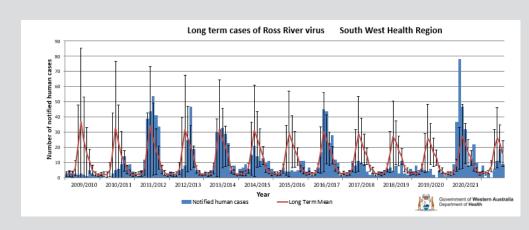

Ross River virus (RRV)

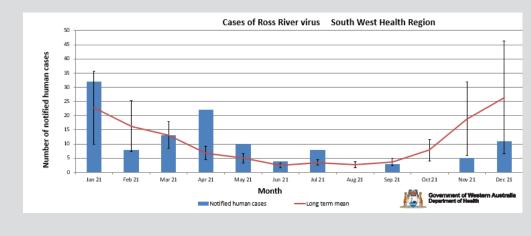

South West Health Region

16 RRV cases notified for the South West Health Region including 14 cases notified by Doctor. Follow-up data is available for 10 cases.

The number of cases was **below the long term mean** for December and **significantly below the long term mean** for October and November 2021.

Barmah Forest virus disease case data summary

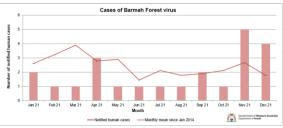

South West Health Region and State summary: Oct - Dec 2021

Data reflected in this summary of mosquito-borne disease is taken from the Western Australia Notifiable Infectious Disease Database (WANIDD) and includes enhanced surveillance data collected by Population Health Units and local governments (only locations with notified cases of disease are shown in tables and figures).

Barmah Forest virus (BFV) Western Australia

A total of 10 cases of BFV have been reported between 1 October 2021 and 31 December 2021 in Western Australia. 4 were notified by Doctor and follow-up data is available for 3 cases.

The number of cases was above the long term mean for November and December.

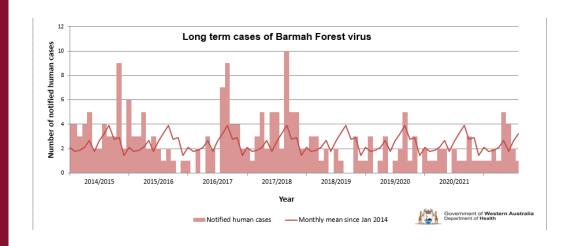

Barmah Forest virus (BFV) South West Health Region

3 cases were notified, including one notified by Doctor, between October to December 2021. Follow-up data is available for the case in Gelorup.

The long term monthly mean is less than one case per month for this region.

Climate outlook for Western Australia

Mar - May 2022

Predicted impact of climatic conditions on mosquito breeding

La Niña remains active and is at or past its peak and should return to neutral in coming months during autumn.

The IOD is neutral levels, and has little influence on Australian climate at this time of year.

Impact on mosquito breeding: Warmer days and nights across much of the state are conducive to mosquito breeding and possible mosquito-borne virus activity where water remains stagnant.

No MVE or Kunjin virus activity has been detected in sentinel chicken flocks in the Pilbara and Kimberley since September 2021.

El Niño-Southern Oscillation (ENSO)

A weather forecast based on interaction between the atmosphere and tropical Pacific Ocean. Conditions can be El Niño, La Niña or neutral:

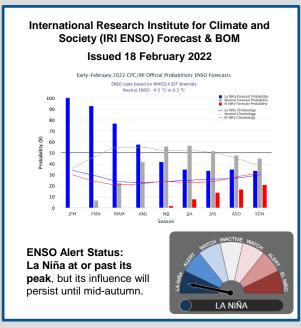

El Niño: Associated with drier conditions, decreased rainfall and tidal activity. Warmer days in south. Late start to northern wet season with less cyclones and less flooding.

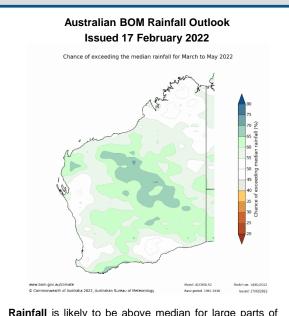

La Niña: Associated with wetter, cooler days and warmer nights (due to increased cloud cover). Earlier start to the northern wet season with more tropical cyclones. More conducive to mosquito breeding and possible mosquito-borne virus activity.

Indian Ocean Dipole (IOD)

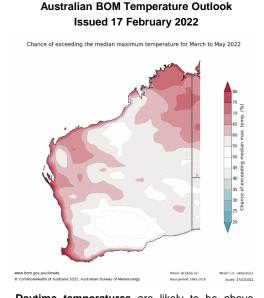

Positive IOD: Brings below average winter-spring rainfall, warmer days in the west, warmer nights in the south west, and cooler nights in the north.

Negative IOD: Brings above average winter-spring rainfall, cooler days in the south, and warmer nights in the north with increased chances of flooding.

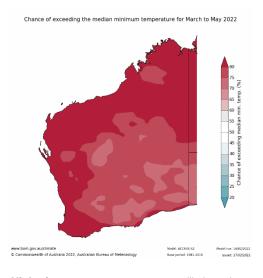

Rainfall is likely to be above median for large parts of the state, with average rainfall expected for other parts.

Daytime temperatures are likely to be above median the coastal areas and tropical north, with average temperatures in other areas.

Night-time temperatures are very likely to be warmer than median across the whole state.
