

Western Australian Coding Rule

0113/06 Transient bone marrow oedema of hip

Q.

Please advise the correct diagnosis code for transient bone marrow oedema of the hip.

A.

Clinical advice has been provided and transient bone marrow oedema is not a condition in its own right. It is either a symptom of transient osteoporosis or avascular necrosis. Clarification from the treating clinician should be sought for each case.

DECISION

Transient bone marrow oedema is not a condition in its own right. It is either a symptom of transient osteoporosis or avascular necrosis. Clarification from the treating clinician should be sought for each case.
